**DETAILED ACTION**

This is the first Office Action after Request For Continued Examination (RCE) for serial number 10/007,509, Remotely Attachable And Separable Coupling, filed on December 5, 2001.

***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 6-21, 27, 68-76, and 85-88 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over

Art Unit: 3632

claims 1-25 of U.S. Patent No. 6,644,617 to Pitlor. Although the conflicting claims are not identical, they are not patentably distinct from each other because the prior art listed above have all the elements shown in the applicant's claims.

Pitlor '617 discloses an assembly for releasably coupling a first subassembly to a second subassembly, comprising: a base, a first portion of a coupling means (magnet means); a rod-accepting means being adapted to have an end of the rod inserted therein, and the coupling means comprises a latching means, which is included in the suspended subassembly and the secured subassembly with one member of the latching means comprises laterally spaced apart catches, and the other latching arm translatable to and from relative to the catches to engage and disengage them.
